Art Unit: 3621

DETAILED ACTION

1. In view of the appeal brief filed on April 21, 2005, PROSECUTION IS HEREBY REOPENED.

- 2. To avoid abandonment of the application, appellant must exercise one of the following two options:
- (1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,
 - (2) request reinstatement of the appeal.
- 3. If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Response to Arguments

4. Applicant's arguments with respect to claims 8-26 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 8-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shimura (US 6,176,826) in view of Budike, Jr. (US 6,904,385).
- 7, Regarding claim 8 –

Art Unit: 3621

Shimura discloses discloses a method for providing measured values for end customers, comprising the steps of recording a measured value for a process variable using a sensor S1, S2, S3; counting the number of transmission operations (e.g. col 4 In 20-35)

- 8. Shimura does not disclose, but Budike does, calculating the costs for the end customer on the basis of the number of the transmission operations (e.g. col 7 ln 25 col 8 ln 55).
- 9. It would be obvious for one of ordinary skill in the art to combine the teachings of Budike and Shimura in order to more easily calculate costs to the consumer. Further, it would be obvious in any event, to utilize the readings obtained by the apparatus in Shimura in order to calculate costs, payment, amounts, etc.

10. Regarding claim 9 -

Shimura discloses the method as defined in claim 8, wherein the data transmission between sensor S 1, S2, S3 and the process control system PLS takes place in line-conducted fashion, using, for example, a data bus system DBS (e.g. col 4 in 20-35)

11. Regarding claim 10 -

Shimura discloses the method as defined in claim 8, wherein the data transmission between sensors S1, S2, S3 and the process control system PLS takes place by radio (e.g. abstract).

12. Regarding claim 11 –

Shimura discloses the method as defined in claim 8, wherein the number A is stored in the sensor S1, S2, S3 (e.g. col 4 In 20-35)

Page 4

Application/Control Number: 09/862,502

Art Unit: 3621

13. Regarding claim 12 –

Shimura discloses the method as defined in claim 9, wherein the number A is stored in the sensor S1, S2, S3 (e.g. col 4 In 20-35)

14. Regarding claim 13 –

Shimura discloses the method as defined in claim 10, wherein the number A is stored in the sensor S1I, S2, S3 ((e.g. col 4 In 20-35)

15. Regarding claim 14 –

Shimura discloses the method as defined in claim 8, wherein the number A is stored in the process control system PLS (e.g. fig. 1).

16. Regarding claim 15 –

Shimura discloses the method as defined in claim 9, wherein the number A is stored in the process control system PLS (e.g. fig 1).

17. Regarding claim 16 –

Shimura discloses the method as defined in claim 8, wherein the measured values are transmitted over the internet from the sensor S1, S2, S3 to a database at the field transmitter manufacturer, to which data base the end customer likewise has access over the internet, and wherein the number of database access operations by the end customer to this database is counted (e.g. fig 1).

18. Regarding claim 17 –

Carrier discloses the method as defined in claim 9, wherein the measured values are transmitted over the internet from the sensor S 1, S2, S3 to a database at the field transmitter manufacturer, to which database the end customer likewise has access over

Art Unit: 3621

the internet, and wherein the number of database access operations by the end customer to this database is counted (e.g. fig 4).

19. Regarding claim 18 –

Shimura discloses the method as defined in claim 10, wherein the measured values are transmitted over the internet from the sensor S1, S2, S3 to a database at the field transmitter manufacturer, to which database the end customer likewise has access over the internet, and wherein the number of database access operations by the end customer to this database is counted (e.g. fig 4).

20. Regarding claim 19 –

Shimura discloses the method as defined in claim 11, wherein the measured values are transmitted over the internet from the sensor S1, S2, S3 to a database at the field transmitter manufacturer, to which database the end customer likewise has access over the internet, and wherein the number of database access operations by the end customer to this database is counted (e.g. fig 4).

21. Regarding claim 20 –

Shimura discloses the method as defined in claim 12, wherein the measured values are transmitted over the internet from the sensor S1, S2, S3 to a database at the field transmitter manufacturer, to which database the end customer likewise has access over the internet, and wherein the number of database access operations by the end customer to this database is counted (e.g. fig 4).

22. Regarding claim 21 –

Application/Control Number: 09/862,502 Page 6

Art Unit: 3621

Shimura discloses the method as described in claim 8, wherein the measured values are transmitted by radio from the sensor S1, S2, S3 to a database at the field transmitter manufacturer, to which database the end customer likewise has access over the internet, and wherein the number of database access operations by the end customer to this database is counted (e.g. col 4 ln 20-35).

23. Regarding claim 22 -

Shimura discloses the method as defined in claim 9, wherein the measured values are transmitted by radio from the sensor S1, S2, S3 to a database at the field transmitter manufacturer, to which database the end customer likewise has access over the internet, and wherein the number of database access operations by the end customer to this database is counted (e.g. abstract).

24. Regarding claim 23 -

Shimura discloses the method as defined in claim 10, wherein the measured values are transmitted by radio from the sensor S1, S2, S3 to a database at the field transmitter manufacturer, to which database the end customer likewise has access over the internet, and wherein the number of database access operations by the end customer to this database is counted ((e.g. col 4 ln 20-35)

25. Regarding claim 24 –

Shimura discloses the method as defined in claim 11, wherein the measured values are transmitted by radio from the sensor S1, S2, S3 to a database at the field transmitter manufacturer, to which database the end customer likewise has access over the

Art Unit: 3621

internet, and wherein the number of database access operations by the end customer to this database is counted (e.g. fig 4).

26. Regarding claim 25 –

Shimura discloses the method as defined in claim 12, wherein the measured values are transmitted by radio from the sensor S1, S2, S3 to a database at the field transmitter manufacturer, to which database the end customer likewise has access over the internet, and wherein the number of database access operations by the end customer to this database is counted (e.g. fig 4).

- 27. Shimura discloses a method for selling measured values to end customers, comprising the steps of: recording a measured value for a process variable using a sensor S1, S2, S3; transmitting the measured value to a process control system PLS; counting the number A of transmission operations (e.g. col 4 ln 20-35)
- 28. Shimura does not disclose, but Budike does, calculating the costs for the end customer on the basis of the number of the transmission operations (e.g. col 7 ln 25 col 8 ln 55).
- 29. It would be obvious for one of ordinary skill in the art to combine the teachings of Budike and Shimura in order to more easily calculate costs to the consumer. Further, it would be obvious in any event, to utilize the readings obtained by the apparatus in Shimura in order to calculate costs, payment, amounts, etc.
- 30. Examiner's note: Examiner has cited particular columns and line numbers in the references as applied to the claims above the convenience of the applicant.

 Although the specified citations are representative of the teachings in the art and are

Art Unit: 3621

applied to the specific limitations within the individual claim, other passages and figures may be applied as well. It is respectfully requested from the applicant, in preparing the responses, to fully consider the references in entirety as potentially teaching all or part of the claimed invention as well as the context of the passage as taught by the prior art or disclosed by the examiner.

Conclusion

- 31. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- 32. Holowick (US 6,710,721) discloses a radio frequency automated meter reading device.
- 33. Shimura et al (US 6,110,108) discloses a home care system, center terminal and patient terminal.
- 34. Takagi et al (US 6,535,118) discloses a priority controlled network.
- 35. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cristina Owen Sherr whose telephone number is 571-272-6711. The examiner can normally be reached on 8:30-5:00 Monday through Friday.
- 36. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Trammell can be reached on 571-272-6712. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
